Delaware State Fire School's Foam Replacement Initiative

The State of Delaware, in collaboration with the Delaware State Fire School, has entered into a contract with Training Specialties Inc (TSI) of Exton, PA. TSI will render services to support the Delaware Fire School and the Delaware Fire Service in the remediation of PFAS-contaminated foam in firefighting equipment. The Fire School Staff will supervise the project, which encompasses the extraction of the contaminated foam, cleansing of the foam reservoirs, and refilling with an eco-friendly firefighting foam.

On July 11, 2024, at 10:00 AM, there will be an official contract signing involving the State of Delaware Representatives, the State Fire School, and Training Specialties Inc. This event will include a demonstration of the newly selected Class B Firefighting Foam, considered the best available option today. This eco-friendly foam represents a significant step towards a healthier environment and safer communities served by the Delaware Fire Service.

The live demonstration, showcasing the foam's effectiveness on flammable liquid fires, is open to all fire and rescue service personnel interested in attending.

For any inquiries, please contact the Delaware State Fire School offices.
